Location:	2nd Floor, Walbrook Wharf, 78-83 Upper Thames St, London EC4R 3TD

About Reevo

At Reevo we believe that a transparent relationship between brands and consumers is better for both. Over 200 brands agree with us and use our Ratings & Reviews and Customer Intelligence products to engage with, listen to and learn from their customers.

We also believe we can help everyday people make better decisions about what to buy, by connecting them with likeminded people. That's why we're always innovating – creating new tools for customers to express their opinions and constantly improving the ones we have.

We don't settle for average. We strive to make great products that our clients love to use. If you work with us you will too.

The Technology Team

- We believe in solving our client's and their customers problems with simple, elegant technical solutions.
- We know that to do this sustainably, we must adopt engineering practices like Test Driven Development, Infrastructure as Code and Continuous Delivery.
- We take an iterative and incremental approach to software delivery and break down solutions so that they can be delivered in such a way.
- We are a cloud native business, have invested heavily in our AWS infrastructure, and use managed services to accelerate delivery.
- We believe in collaboration and knowledge sharing, frequently showcasing our work to technical and non-technical audiences.
- We're always looking for ways to continuously improve our processes and technology and encourage everyone to share their ideas and suggestions.

What will you be doing?

We are looking for a Senior DevOps engineer to join our team in London. Above all, we are looking for someone who is passionate about technology, connects their work to the needs of our clients, and builds solutions they love to use.

- Design, build, improve and maintain Reevo's core platform for collecting and sharing ratings and reviews and other user generated content.
- Design, build, improve and maintain our application development platform in close collaboration with our team of application engineers.
- Ensure the necessary monitoring and alerting systems are in place to deliver the high quality of service our clients expect.
- Evaluate the security of our environments and applications to ensure the necessary information security practices and tools are in place.
- Continue to evolve our infrastructure and look for opportunities to incorporate new cloud technologies which can improve the team's productivity and drive costs down.
- Rotate through our on-call schedule.

What will the successful candidate be like?

- You will have a passion for technology and a desire to design and build simple, elegant solutions to complex problems.
- You will be a great communicator and able to explain technical concepts to both technical and non-technical audiences.
- You will have a desire to collaborate with people across the business and connect your work to the needs of our clients.
- You will have a desire to simplify and rationalise complex systems.
- You will be professional, reliable, and hold others to accountable for their commitments.

Skills & Experience

Required:

- A deep technical understanding of AWS and containerised cloud hosting using Docker, Kubernetes (EKS), and Helm.
- Experience with a range of other AWS services such as EC2, RDS (Postgres and/or MySQL), Redshift, SQS, Cloudwatch, ECR, ELB, Elasticsearch, Route 53, S3, VPC.
- Experience working with distributed, service oriented application architectures e.g. REST.
- Experience with Infrastructure as Code tooling such as Terraform, Ansible and Chef.
- Experience of designing, building and running Continuous Integration and Delivery pipelines.
- Experience with Git, Github and Make for build automation.
- An understanding of DevOps principles and how they influence your daily priorities and selection of solutions.
- Comfortable with Linux administration.
- Knowledge of HTTP cacheing, CDN's and load balancers.
- Ruby and Bash scripting experience.
- Comfortable working with SQL databases (PostgreSQL/MySQL)
- Experience of working in an agile delivery environment.

Desirable:

- Knowledge of other technologies in our stack (e.g. Ruby on Rails, Nginx, Varnish, Elasticsearch, RabbitMQ).
- Working in an ISO27001 certified environment, and experience with the certification process.

Reevo is an Equal Opportunities Employer.

Please note: we can only consider applicants with the current legal right to work in the UK.
