Data Scientist

Team:	Technology
Reports to:	Head of Data
Contract Type:	Permanent, Full Time
Location:	2nd Floor, Walbrook Wharf, 78-83 Upper Thames St, London EC4R 3TD

About Reevoo

At Reevoo we believe that a transparent relationship between brands and consumers is better for both. Over 200 brands agree with us and use our Ratings & Reviews, Social and Customer Intelligence products to engage with, listen to and learn from their customers.

We also believe we can help everyday people make better decisions about what to buy by connecting them with likeminded people. That's why we're always innovating – creating new tools for customers to express their opinions and constantly improving the ones we have.

We don't settle for average. We want to make cool stuff that serves a good purpose. If you work with us you will too.

The Technology Team

We care a lot about producing insightful actionable analytics for our clients, which include some of the best-known brands in retail, manufacturing, auto and travel industry.

We support an architecture that handles 30m unique hits a day and growing. This is all run in one of Amazon Europe's first commercial deployments of its EKS Kubernetes service.

Data and analytics are an important part of our long term vision and we have been heavily building our analytics infrastructure using best-in-class technologies including Amazon Redshift, Luigi, Tableau, and are constantly looking to improve our stack.

Who are we looking for?

We are looking for someone with a unique mix of data analysis and data engineering skills – the ideal person will be comfortable both creating new data sets and exploring trends and insights in the data.

This is a great opportunity for someone who wishes to break away from the usual data science / data engineer separations and develop a full stack data skillset.

reevoo.com

What will you be doing?

As a senior member of the data team, you will get the chance to get your hands dirty working on a variety of projects, for example:
- Building new datasets for our rapidly evolving data warehouse.
- Running statistical analyses to understand correlations between review scores.
- Extracting insights from our rich text data using NLP and machine learning
- Building interactive dashboards to allow our internal teams and clients to better understand user reviews to improve their product and brand experience.
- You will also get the chance to communicate your analyses and insights with internal and external stakeholders.

Skills & Experience

Required:

- Strong SQL experience.
- Experience modelling and building datasets.
- Strong Python data exploration and analysis skills.
- Good understanding of statistical methods.
- Good listening and communication skills.
- Experience building interactive visualisations, ideally in Tableau

Desirable:

- Experience with AWS Redshift.
- Experience with version control (GitHub) and continuous integration (BuildKite or similar).
- Experience with Luigi framework or similar.
- Knowledge of Alteryx.
